TELUS Field Pack for Energy Services keeps field workers safe and connected

New TELUS solutions help energy service companies increase productivity and performance while reducing overall costs

Edmonton, AB – TELUS today announced the launch of its TELUS Field Pack for Energy Services which will help Canadian energy services companies address labour challenges and strengthen their productivity strategies.

With over 70 per cent of energy service employees working primarily in the field, TELUS Field Pack for Energy Services offers businesses reliable information about the status of employees, jobs and pieces of equipment in real-time. The TELUS Field Pack for Energy Services improves and speeds decision-making through instant collaboration tools that can increase field productivity through optimized route scheduling, expedite accurate invoice payments, and provide instant connectivity to corporate applications. Variable pricing based upon the applications each customer requires is one of the benefits the Field Pack offers to business.

“With more than 100 years of experience serving companies in the energy industry, TELUS understands that Canada’s energy services companies operate in a market characterized by commodity price volatility, increased government regulations, and significant workforce challenges,” said Roland Labuhn, TELUS vice-president, Energy. “With this in mind, TELUS has responded to the dynamic needs of the energy services sector with the launch of the TELUS Field Pack, providing customers with scalable, cost-efficient solutions that will facilitate safety and improve field productivity by extending key industry applications onto mobile devices. TELUS is at the forefront of developing mobile business solutions customized to the needs of the energy services sector.”

Included in the TELUS Field Pack are productivity, safety and security solutions such as:

- **Wireless Field Ticketing** eliminates manual ticketing and reduces payment cycle times by weeks or months
- **Fleet Tracking and Automated Vehicle Location** optimizes dispatch and delivery, reduces fuel usage, and ensures adherence to company usage protocols and proper maintenance schedules
- **TELUS Navigator** provides real-time, voice-prompted GPS navigation, reducing travel time spent finding a site location
- **Visual Voice Mail and unified mailbox** saves time by consolidating voicemail, e-mail and fax messages in a single application, and delivering voicemail as text messages that can be read anytime, anywhere
- **Work Alone Solutions** monitor mobile workers in real-time, notifying managers when workers fail to report on time or in emergency situations
- **TELUS Premium Desktop Backup** automatically backs up critical data, and protects against IT breaches

On July 25, TELUS will host a workshop and keynote address at the Energy Services Summit in Edmonton, Alberta, (www.energyservicesummit.com) to discuss the current challenges facing the Canadian energy services industry, and how TELUS is helping customers tackle these head on through the use of advanced communications solutions.
