

TELUS SafetyNet™ solutions

security and safety for your assets,
people and communities

You have a lot to look after – your assets, your employees, and the communities where you operate. Ensuring their security and safety is a priority for energy companies across Canada. TELUS can help. We deliver a comprehensive set of safety solutions – from occupational health and safety assessments to technologies that enable best-in-class worker and community safety. TELUS SafetyNet™ solutions are designed for the energy sector. Our dedicated energy sector team will take the time to understand your business issues and tailor a solution to meet your exact needs.

protect your people

Occupational Health & Safety (OH&S) Services. TELUS' specialized OH&S team focuses on the interface between your employees and their work environment. We cover the full spectrum of OH&S activities: determining the hazards and risks of various jobs, defining fitness to work for new placements, providing appropriate orientation and training to ensure that employees know how to work safely, intervening when incidents occur to ensure appropriate medical follow-up for employees, and timely assessment of causes of injury.

Work Alone Solutions. Furthering employee safety is a priority for many companies. TELUS offers a Web-based wireless, automated worker-location system that monitors mobile workers in real time. Our Work Alone System notifies emergency operations when a worker fails to report after a designated time or when a self-reported crisis occurs (push to talk).

Driver Safety Solutions. For monitoring driver behaviour and empowering corporate safe-work programs, TELUS offers a Mobile Resource Management service. Our Fleet Management Safety module logs and actions user-defined safety events such as seat belt usage, driving conditions, speed, brake usage and general driver behaviour.

protect your assets

IP Video Surveillance. TELUS wireless networks, enabled by IP video camera devices, will automatically store images in response to inputs from motion detectors and external sensor alarms. The images are sent automatically to your operations and emergency response centres for action. Applications include:

- Employee safety and theft prevention at retail sites
- Safe operations monitoring: flare stack, tank farms, compressor stations
- Asset protection from vandalism, terrorism or natural hazards

Business Resiliency and Data Protection. TELUS provides a full range of data security to help protect your valuable assets and sensitive information from many different types of threats.

- Disaster Recovery and Business Continuity
- Perimeter protection
- Prevention Services
- Security Management Services

Mobile Assets Protection. Theft of vehicles and the valuable equipment they carry is a costly industry problem. With our Mobile Resource Management Service, you can track fleet vehicles and quickly recover stolen vehicles and equipment. By adding RFID tags, you can monitor employee equipment usage and movement on and off the job site.

protect your communities

Community & Worker Notification. When an incident occurs, it is imperative to quickly and efficiently notify your workers and communities. TELUS can automate the immediate delivery of emergency messages to on-site workers and citizens in surrounding communities through multiple channels (voice mail, e-mail and SMS).

Emergency Response Collaboration. TELUS offers comprehensive functionality for crisis management – enabling your company to better prepare for, respond to, and recover from both large-scale emergencies and everyday incidents. Our system utilizes E Team collaboration software, the industry's leading crisis management solution. For added value, the E Team software and our notification system are integrated into a Web-based geospatial viewer. You can access this easy-to-use and information-rich system wherever you have an Internet connection. Whether you are in the office, at home or on the road, you can quickly respond to emergency situations.
